

NSK

Create it

NSK, as a market leader in high quality handpieces and motors, is proud to sponsor the BSP. Within our periodontal range we specialise in the removal of tartar and biofilm around and below the gingiva together with tooth cleaning and polishing. This significantly improves the results of periodontal treatment.

NSK supports your daily clinical practice, with effective and comfortable to use professional oral care equipment, such as our high-performance ultrasonic and powder therapy devices, including the Varios Combi Pro and Varios Series, to the compact and lightweight air polishing system Prophy-Mate neo as well as Perio-Mate, designed to gently and effectively remove biofilm from periodontal pockets.

NSK is proud of its customer support and service. Since Brexit we now carry a large UK stock holding, and continue to offer a UK based repair workshop along with a localised support network of eleven Product Specialists and two Engineers, providing product trials, demonstrations and after sales care - www.mysnk.co.uk/contactus
